The methods and products can be used for targeting expression specifically to the endosperm of the seeds of cereal plants such as wheat or barley. They can be used for the expression of e.g. antisense sequences of granule-bound synthase (GBSS), SBE II, low mol. wt. glutenin, grain softeness protein I, bacterial isoamylase, bacterial glycogen synthase, and wheat high mol. wt. glutenin BAI7. They can be used for modifying the characteristics of starch produced by a plant. The present sequence represents the SBE II gene sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ŀ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QY
                                                              The present sequence encodes a wheat starch branching enzyme of Aegilops tauschii, designated F2. A. tauschii is likely to be the ancestral D genome donor of wheat. Probes isolated from the present sequence were used to identify type II starch branching enzymes (SBI in wheat, especially BEIIb. The BEIIb nucleic acids may be used to genetically transform cereal plants such as wheat or barley and for altering their nutritional content by modulating the starch biosynthetic pathway to vary levels of amylopectin and/or amylose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (CSIR )

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc capable of stimulating the activity of hormone-sensitive lipase (the key cc enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key cc enzyme in lipolysis) and inhibiting acetyl CoA carboxylase (the key cc enzyme in lipolysis). The growth hormone fragment preferably contains cc at least the disulphide-bonded loop of a mammalian growth hormone (but is cont the full-length growth hormone) and is optionally linked to an epitope tag or heterologous fusion protein partner. The transgenic cc cryanism may be a microorganism used to produce a fermented product (e.g., yeast), or an edible plant or animal or cell thereof. Food or cc drink made using methods of the invention are used to modify fat/lean cc ratio, lipid metabolism or food use in a mammal. In particular, the food or drink products may be used to treat or prevent obesity, particularly cc in humans, and may also be used to treat or prevent obesity, particularly cc invention, the human growth hormone (hGH) fragment analogue ADD9604 was expressed in yeast, optionally fused to the FLAG epitope (AAB73625).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This cDNA clone codes for quail VEGF-C (AAW00934), a novel ligand that binds specifically to the Fit4 receptor tyrosine kinase (VEGFR-3), stimulating phosphorylation of the receptor. The clone was isolated from a quail cDNA library using mouse (see AAR84277) and human (see AAR84276) VEGF-C cDNA fragments as probes. The isolated polynucleotide can be used to produce recombinant polynopeptides corresponding to non-human mammalian variants of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Flt4 receptor tyrosine kinase ligand and related nucleic acid to modulate growth of endothelial cells and for diagnosis of endothelial cell diseases  \begin{array}{c} \text{ } \\ \text{ } \\

                                                gene
                                                            The invention relates to novel genes (AAI93926-AAI97963) expressed in human neuroblastoma. The nucleic acids are applicable as a probe or primer in diagnosing the prognosis of human neuroblastoma, malignancy susceptibility indicators or tumour markers for anti-cancer agents. The susceptibility indicators or tumour markers for anti-cancer agents. The susceptibility indicators or tumour markers for anti-cancer agents.
                                                                                                                                                                               neuroblastoma, malignancy
for anti-cancer agents -
                                                                                                                                                                                           Nucleic acids originating in gene expressed in human neuroblastoma, useful as probe or primer in diagnosing prognosis of human neuroblastoma, malignancy and susceptibility indicator or tumour managements.
                                                                                                                                                                                                                                                                WPI;

                                                               Ş
                                                                                                                                                                     The invention relates to novel genes (AAL34669-AAL37666) and proteins C (ABB03087-ABB04109) associated with the musculoskeletal system useful CC (ABB03087-ABB04109) associated with the musculoskeletal system useful CC protein or gene therapy. The genes are isolated from a range of human CC tissues disclosed in the specification. The nucleic acids, proteins, CC antibodies and (ant)agonists are useful in the diagnosis, treatment CC and prevention of: (a) cancer, e.g. breast and ovarian cancer and CC other cancers of the adrenal gland, bone, bone marrow, breast, CC gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis, CC (c) cardiovascular disorders such as myocardial ischaemias; (d) wound CC and (f) infectious diseases such as viral, bacterial, fungal and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis an treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the protein acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, associated diseases, especially associated acids account of the protein and polynucleotides may be used to prevent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 200

                                                                                                                                                                                                                                     7196
                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of human immune system associat genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

The polyketide synthase polypeptide is useful for the oxidative modification of a methyl group of a suitable compound, e.g. a bioactive compound including a secondary metabolite, antibiotics and anticancer agents. Recombinant cells comprising the gene are useful for the production of pimaricin. The polyketide synthase polynucleotide may be over expressed in Streptomyces, leading to an increase in the biosynthesis of pimaricin, as a source of primers for

                                                                                                                                                                                                                                                                                             The DNA sequences, oligomers (or sets/arrays) and method are useful in the diagnosis of diseases (or predisposition to diseases) associated with gene regulation and in therapy of such diseases, by enabling analysis of the cytosine methylation patterns of such genes, kits are provided. They are especially useful in diagnosis and therapy of e.g. severe combined immunodeficiency disease, cardiac disorders, haemophilia, solid tumours and cancer, Werner syndrome, asthma, HDR syndrome, Saethre-Chotzen syndrome, renal disease, preeclampsia, graft versus-host disease. The present sequence is a sequence included in the sequence data for this specification and is associated with the human gene regulation-associated genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to 224 nucleic acid sequences comprising at le 18 bases of a chemically pretreated gene associated with gene regula selected from 43 known genes (or complementary sequences). The chemical pretreatment converts cytosine bases unmethylated at the 5-position to uracil or another base with hybridisation behaviour dissimilar to cytosine, to enable analysis of cytosine methylations.

(ABB1678-ABB18001) useful for preventing, treating or ameliorating commedical conditions e.g. by protein or gene therapy. The genes are consisted from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast candovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune contities; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and cepilepsy; and (f) infections.

Conte: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format Airnaria.

Recombinant DNA construct comprising producing stably inherited michrosom the construction of transgenic plant XX
CC The present invention relates to a j CC (Arabidopsis thaliana) centromere.
CC The producing stably inherited michrosom the construction of transgenic plant XX
SC (Arabidopsis thaliana) centromere.
CC The producing stably inherited michrosom the construction of transgenic plant SX
CC (Arabidopsis thaliana) centromere.

                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors; cytokines, antibodies, and growth factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1501 aaaaacg 1507
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 101786 BP; 31952 A; 18054 C; 19869 G; 31909 T; 2 other,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /notes PVector: pCMVSPORT 6; Site_1: NotI; 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies.
